ENCLOSURES FOR POOLS AND SPAS

abrisol
COVER SOLUTIONS

At Abrisol we think that an enclosure should fully meet customer needs.

After more than 25 years in the exclusive pool, terrace and spa enclosure sector, we consider that the trust our customers place in us is a privilege and a great responsibility.

Our experience and know-how are second to none, and encourage us to be constantly searching for innovative and original solutions for your project.

Therefore, we have our own R&D+i department that works with state-of-the-art technology, regularly improving our enclosures in order to maintain an unmatched level of quality.

We will be able to make the enclosure of your dreams, because Abrisol not only sells enclosures, it designs them to your requirements.

We are manufacturers

Abrisol designs, manufactures and assembles almost all of its enclosures and covers, without intermediaries.

Our aluminium profiles and Abrisol technology are patented and reflect more than 25 years of experience in the world of pool enclosures.

We can design your custom project

Engineers, technicians, operators, salespeople and customer service personnel work to make your dream into a practical project.

Our extensive catalogue of models offers a modern and functional design to meet your needs.

Abrisol R&D+i

The mission of the Abrisol R&D department is to develop the best technologies on the market and anticipate future trends in enclosures.

Technology in construction evolves at a frenetic pace and Abrisol is always at the forefront when it comes to materials, comfort and efficiency.

Why install an Abrisol enclosure in your home?

An Abrisol enclosure enables you to enjoy the pool even in the coldest months.

Thanks to the greenhouse effect, you can increase the temperature of the water naturally (between 8 and 10 °C) and prevent heat loss through evaporation.

Covering the pool will also offer safety for children, more enjoyment during the bathing season and less maintenance by protecting it from wind, rain and snow.

*Enjoy your pool all
year round*

Safety

For your peace of mind, avoiding accidents involving children and pets.

Swimming

The water temperature will be higher naturally because of the greenhouse

Cleaning

For your convenience. Protects from dust, insects, dirt and dry leaves.

Savings

In cleaning and maintenance products, as well as in energy for purification and heating systems.

Health and well-being

With all the benefits of hydrotherapy.

Warranty

We have the most extensive catalogue on the market. Aesthetics and functionality are key.

Structure

Aluminium extruded at 500 °C. The extrusion is performed according to EN 755-9 and EN 1202 with ISO 9001 certification.
T5 and T6 heat treatment according to EN 755-2.

Abrisol has all the lacquer colours from the RAL chart.
The most requested are the following:

We customize the finish in gloss, matte, wood and textured (rough finish).

Lacquering not only offers aesthetic solutions but also protects the material from corrosion, providing great resistance to impact, great flexibility, uniformity of thickness and resistance to external agents, preserving the colour and gloss for a long time.

These finishes will offer you optimum resistance to climatic agents and UV radiation.

Our enclosures comply with the most demanding regulations in Europe in terms of structural strength and safety.

Enclosure

PC TRANSPARENT COMPACT POLYCARBONATE

Protected on both sides from ultraviolet rays.

One of the most versatile thermoplastics on the market. Excellent transparency and surface gloss.

Extremely robust, resistant against impacts and abrasion.

Exceptional properties against the weather.

More solid and lighter than glass, and it is also a recyclable product.

AL ALVEOLAR POLYCARBONATE

Protected on both sides from ultraviolet rays.

Made up of several small, very thin plates that create a very solid structure, which is ideal for dealing with inclement weather.

Great resistance to impact and good light diffusion characteristics.

It is very light and a very good thermal insulator.

GLASS

If you want a top-of-the-range enclosure, you can opt for glass.

This is a laminated glass, which provides greater safety by being resistant to impacts. Practically indistinguishable from monolithic glass with the same thickness, offering elegance to any space.

Laminated glass is resistant to breakage, and does not break when hit, thus preventing injury to people and damage to nearby objects.

We also have a double glass with a chamber to improve the keep the cold out better for extreme climates.

What is a telescopic enclosure?

It is a pool enclosure composed of modules to be stacked in summer (uncovered) or extended in winter (covered).

The modules slide on the floor using wheels or rails, depending on the model and customer needs (configuration options).

Fixed enclosures

Those that remain in place throughout the year.

They can increase the temperature of the water naturally through the greenhouse effect, or if you wish, by means of heating systems.

In summer it is possible to partially uncover the pool owing to the side doors and/or side hatches.

Attached enclosures

The perfect solution for pools that are near a wall.

If it is a wall of the house, it can even have a direct exit to the interior of the pool, thus turning the pool space into another room in the house, liveable and warm.

Customisation

No one knows better than you what you need for your pool.

We offer a multitude of combinations for the enclosure of your dreams.

Our technical team will be happy to assist you in making decisions.

Robust and elegant

Accès à la façade

More than **20 years**
as a leader in **pool enclosures**

TABARCA

The most successful tall enclosure model.

Fixed high enclosure that stands out for the robustness and elegance of its lines. It is characterized by its spectacular dome shape.

The mobile side panels allow a wide variety of opening options, despite it being a fixed enclosure.

Tabarca offers you the ideal option to turn the pool space into a room designed for relaxation.

CONFIGURATION OPTIONS	
<p>ROOF MATERIAL</p> <p>PC  AL </p>	<p>SIDE ACCESS</p> <p></p>
<p>SIDE MATERIAL</p> <p>PC  AL </p>	<p>VENTILATION</p> <p>  </p>

<p>FAÇADE AND REAR ACCESSES</p> <p>  </p>	<p>OPENING SYSTEM</p> <p> </p>

Simple and discreet

IBIZA

Telescopic

The **telescopic version** of the **Tabarca** model.

It can be enjoyed as both fixed and telescopic, with the advantages that this implies.

Exclusive system of side hatches to increase access possibilities.

All this and its finishes make it the enclosure with the most options and configurations in the Abrisol catalogue.

The Ibiza model represents the best in Abrisol telescopic enclosure technology.

Luxury and distinction

ROTONDA

Fixed

This telescopic enclosure stands out for the simplicity of its lines and its ease of use.

It is characterized by its classic pitched roof.

This enclosure design lets you be inside, comfortably making the most of the space, and when it is removed, it allows easy access to the swimming pool without any kind of obstacle that could hinder access.

What's more, when the modules are slid together, the roof is configured as a practical covered porch.

CAPRI

Telescopic

This telescopic enclosure stands out for the simplicity of its lines and its ease of use.

It is characterized by its classic pitched roof.

This enclosure design lets you be inside, comfortably making the most of the space, and when it is removed, it allows easy access to the swimming pool without any kind of obstacle that could hinder access.

What's more, when the modules are slid together, the roof is configured as a practical covered porch.

ATTACHED CAPRI

The perfect solution for pools near a wall.

If it is a wall of the dwelling, you can even gain direct access to the interior of the pool with all the advantages that this entails.

It moves along a track system installed on the wall and via polyamide wheels running along the ground.

OPENING SYSTEM

PALMA

Telescopic

Telescopic enclosure with five angles, which gives it a greater capacity to cover large pools.

Given the strength of the structure, it is also the best option for locations prone to adverse weather conditions, such as snow or strong wind.

You can choose between opening at one end or a central opening.

In its high-enclosure version, you can choose the opening option from the second module, turning the first module into a practical covered porch.

"We were looking for a high enclosure that was resistant to the weight of snow that usually falls in the colder months. The Palma option gave us the safety we needed."

PC 	AL 				
SIDE MATERIAL			SIDE ACCESS		
	PC 	AL 			
FAÇADE AND REAR MATERIAL			VENTILATION		
	PC 	AL 			

COLUMBRETE

Fixed

Columbrete is a classic enclosure with elegant lines.

The double-door is installed in the façade or the back without a track on the ground.

Sliding doors can be installed on the sides of each module to facilitate access and provide optimal ventilation.

CORFÚ

Telescopic

Distinguished enclosure that combines the straight lines of its sides with the elegance of its curved roof.

The option of a ground track facilitates maximum sliding of the modules and allows intermediate openings and in both directions. At the same time, it provides you with greater stability and support.

Corfu can be manufactured to the height desired by the customer. It can also be attached to a façade.

MALTA

Telescopic

Telescopic enclosure with soft curved lines, that stands out for its practicality and adaptability.

Available in low and mid-high options (up to 1.80 m high in the largest module).

Its different configuration options, both in the placement of the tracks and the size of the modules, allow this enclosure to be adapted to any type of pool.

Sliding of modules is independent and in both directions, which allows openings to be partial, total or intermediate.

MADEIRA

Telescopic

Elegant hemispherical geometry enclosure that stands out for its ease of handling.

The sliding of the modules is always achieved by installing tracks at the sides, which will allow you to make intermediate openings.

You will love to experience the feeling of taking a swim in a bubble thanks to its curved roof.

The space and freedom that only an enclosure like this can provide.

Economical and discreet

The best alternative to roller blinds.

TAPIA TELESCOPIC

Premonted
FAST AND EASY
Ready to install

Telescopic

Enclosure that stands out for its discretion and its unbeatable value for money.

Available in two heights: flat and low.

With a minimum width of 2.50 m and a maximum of 6.3 m, it can fit any pool.

As available options, we have different opening possibilities: central or from one end. You also have the option of putting tracks (on one or both sides) or wheels on both sides.

You can install a side access on the larger module.

Take advantage of the pre-assembled pack to save on assembly costs

Competitive price

Fast and easy

Practical and safe

"Our little grandson comes home on the weekends and we were worried that he might have an accident and fall into the pool by accident.

We decided to install Lanzarote, and we now have peace of mind to fully enjoy his visit."

CONFIGURATION OPTIONS		
ROOF MATERIAL	FAÇADE AND REAR MATERIAL	SIDE ACCESS
PC 	AL 	 

LANZAROTE

Liftable

Low modern aerodynamic design enclosure, based on a system of independent lifting modules that allow side access to the pool.

Discreet and low profile, Lanzarote will take up very little space in your garden.

Custom-made in both width and height, it fits pools with little beach space or irregular shape.

Elegant and modern

CHYPRE

Telescopic

Characterised by oblique sides and a curved roof, Chypre stands out for its updated style.

Thanks to its thermoformed polycarbonate plates, this model provides an enclosure without a joining profile between the roof and sides.

You will love to experience the feeling of taking a swim in a bubble, feeling the space and freedom that only an enclosure like this can provide you.

Simple and economical

TAPIA

Fixed

The most simple, practical and affordable way of protecting your pool all year round.

Virtually flat enclosure with removable and stackable modules.

Each module has four handles for easy lifting.

Ideal enclosure for second homes, where the goal is protecting the pool for long periods at a very affordable price, but with higher quality and durability than conventional tarpaulins.

SFERA

Spherical-shaped spa enclosure with a telescopic structure for year-round enjoyment.

Enclosure formed by polycarbonate plates with double-sided UV filter to offer a full panoramic view from your spa.

Installation without tracks on the ground and with a variety of colours for the structure.

Sfera: a perfect enclosure, the result of the creative work of the Abrisol technical team.
